## What's New In 9Zip?

9Zip is the most robust and feature rich open source zip utility. 9Zip is the most popular self-extracting zip utility. It is the only self-extracting zip utility that can open password protected zip files. 9Zip also enables you to: - open password protected zip files - create password protected zip files - unzip an assortment of archive formats including rar, 7z, cab, tgz, war, pk, gz, bz2, xz, iso, csv, xap, vhdx, bmp, lha, dmg, lzh, jar, zip, exe, cbr, lzh, or 7z. 9Zip Features: - archive managers interface - ZIP files - append files - diff/merge files - rename files/folders - hex-dumps files/folders - SHA-256 hashes for checksums - AES encryption/decryption - ZIP password protection - 7Zip password protection (zip) - up to 4 threads - UMD support - RAR 5 support - XZ (LZMA) support - TAR support - RSAR, RSAR+ (RAR + files compression) support - support for HPFS files - LZH support - dump of registry - 7z support - 64-bit support - .db support - Intel hardware acceleration If you have Intel hardware acceleration and keep using the same password more often than the same thing, the CPU will always be confused because it does not know for what it is. Frankly, when there's an easy chance of having it considered a ransomware, the software's users may be shot down by the police, and or the FBI, if, or when, the culprits in question reveals to them which the tool in question is, and identifies to them that it's so. All this, of course, depends on who you name the 'culprits', whether they are the right ones, and who shot them or not. The one of the tools I used to make up those lines was something else: it could be used to open up any archive, even if it is password protected. It just bypasses the password mechanism so that it can treat it like one would do with a regular file, at least that's what it made me believe when I first saw it.
