What's New in the?

This is a simple dictionary that helps you translate words from English into Spanish or vice versa. Its objective is to make it easier for Spanish and English learners to translate. You

may also use it as a tool to reinforce your already acquired language skills. To translate a word, type the English or Spanish word into the search box and click on the corresponding box. You may use the dictionary in two ways: basic and advanced. In the basic search mode, the program uses several

options to determine the most appropriate translation for your query. In addition, the program tells you what functions the word belongs to and what its function is. In the advanced search mode, you can define your own search parameters for a more precise translation. The

dictionary provides you with options to define a list of functions, prepositions, or pronouns as search parameters. To get to the next or previous result, just click on the corresponding box. You may also use the dictionary to listen to the pronunciation of the word. The translation and

pronunciation are shown in the same window. You can print the whole list of translations by clicking on the Print button. The dictionary does not display a history or a text-to-speech tool. There is no support for a concordance. System Requirements: Windows OS, version 10.0 or higher 1.7
