Advanced EXIF and IPTC Data Viewer Freeware Exiv2 is a powerful image management application, and it's one of the few image viewing/managing software available on the web. It supports almost all file types as well as EXIF/IPTC (Exif/Interphoto-Tiff) embedded data. It has a friendly GUI that is easy to use, easy to learn, and user-friendly. For more image management information, visit its site and please read its review. If you have any question, suggestions or feedback, please let me know. It's free and open-source. Exiv2 has been released under the LGPL license (GNU GPL). The original Xiph.org version (xiph.org) was released under the same license. I've extracted this copy from its repository, modified it, cleaned up its sources, added some additional features, and created a standalone exiv2 tool. Note that Exiv2 was written in C++ language and was released under LGPL 2.1, not LGPL version 2. This reason is described in detail on this page. Note: The default version of Exiv2 does NOT support reading IPTC data (currently only viewing). If you are interested in its IPTC capability, please check out this page. The price is exactly the same. The pricing for both exiv2-bin and exiv2-cli-bin is \$14.
