educational, and like a good present, never a burden. My family and I have used Domino's Pizza (25-30 min.) for a few months, during which time we've stopped using them. But the pizza place has been around since the 50s, so we decided to give them one more try. Our first pizza (which, as you can imagine, has a bit of a history) tasted pretty good. But we were disappointed in their delivery, as there was a 7.5-minute delay to pick up our order. That delay was actually more than 7.5 minutes. As I think about it, it was almost an hour. Download from YouTube Video: Fractal Generator - Hex Grid Generator - By mr_ocelot The Fractal Generator is a unique scientific tool that creates complex figures of any size or shape. The basic concept is very simple - to create a fractal, you first need to start with a box. You can then adjust the settings (size, rotation, style, etc.) of the box and the generator will create a fractal of the newly defined size and dimensions. The results can be saved in a number of different file formats (DVI, EPS, WMF, etc.). A well structured workflow is at the core of the

Fractal Generator. The user starts by defining the main parameters and the generator calculates all the rest automatically. That is, the user can start generating a figure right away without even having to calculate the outline. After several clicks, the generator can create a complex image consisting of various elements and its connected interior. In order to create a coherent image, the user has a few more functions to choose from. To create a color image, the user can choose a preset color for the background or he can provide a RGB color value. He can also select a color for the border of the elements or set the color to black and white. Finally, the user has the option to

configure the internal style, which allows him to choose between a solid, dashed or dotted background or a texture pattern. The generated figures are dynamically loaded as image sequences and can be exported as a series of JPEG files. The file format can be further customized in the configuration settings. Moreover, the user can share the generated images on Facebook, Twitter or send them by e-mail.
