Ashampoo WinOptimizer With License Code (Updated 2022)

Cleaning and maintaining your PC should always be one of the main concerns when frequently making use of a computer. Why? Simply because just like in real life, no matter what activity you conduct, there's bound to be waste left behind that needs cleaning. Ashampoo WinOptimizer is one particular tool you can utilize to clean up your machine after prolonged use. It makes it easy for any user to execute maintenance and avoid serious issues with a PC, later down the road. Organized and intuitive, overall The main issue with cleaning programs these days is that there is a tendency to complicate each particular action. That is not something you should experience when using WinOptimizer. The modern-looking menu will suit all users, as will the accurate labeling and placement of buttons for launching any particular cleaning action. Before changing anything, the app will ask the user to conduct a preliminary scan or analysis. You can opt to have the app run this action every time you launch it. The program will scan for browsing traces, useless registry entries and files, broken shortcuts, bothersome services, and security issues. Additionally, one can optimize system settings for an even better response time and clean the recycle bin, if you're not used to doing it. A suite of automatic actions can be programmed for further convenience. This means you can sit back while WinOptimizer takes care of any issues it detects while running. Aside from Auto-Clean, one can engage the use of Live-Tuner and Game-Booster, both designed to run games and apps faster and more efficiently. Advanced features for experienced users If letting the program handle your PC's maintenance is not enough for you, and would subsequently like to have more control over the cleaning process itself, WinOptimizer allows you to do just that. The All Modules section consists of all particular apps and actions divided into intuitive categories. You can choose between maintenance, improvement, customization, analysis, and administrative operations, each breaking down into further options for you to choose from. The application doesn't restrict its activity to system improvements and adjustments only. It can also be used to check hardware and software data, disk space, running applications, and so on. A benchmarking feature can give you a rough idea about how well your machine performs. Since WinOptimizer brings quite a lot of changes to your machine, the inclusion of a backup utility made perfect sense. This means you have no reason to fear losing important data or functionality during or after using WinOptimizer. Ashampoo WinOpt

What's New in the?

Keep all your precious data safe with Ashampoo Backup Studio. It allows you to use different backup solutions without the hassle of installing, managing and maintaining each and every one of them separately. Backup Studio helps you create backup projects for your computers, mobile devices, USB sticks and more. With its intuitive tools and state-of-the-art backup algorithms, backup Studio allows you to easily create your backup list. In addition to modern backup functions, Backup Studio also includes a series of useful tools to make your backups even more efficient. For example, you can set-up „filtered backups“ to exclude unnecessary files and folders to keep your backups small and fast. Features Creating backup lists - Backup Studio makes it easy to create and manage backup lists. A backup list is a folder structure that makes it easy to find all your important files, e.g. for the backup of your desktop. Exclude files and folders for your backup - Backup Studio allows you to exclude certain files or folders from your backup lists. You can set filters that you can use to ignore large amounts of files and folders, as well as recursively filter for hidden files and folders or files that have a certain extension. Filtered backups - One of the most useful functions in Backup Studio are the „filtered backups“. You can set to never backup, only folders or only certain types of

files, such as for example the *.zip and *.rar archive files. Optimization - Backup Studio is specially designed to make your backup lists as efficient as possible. For example, you can exclude files and folders that are no longer used from your backups or limit the size of the backup. Analyze and optimize the backup list - Backup Studio makes it easy to create and optimize the backup list. You can use the „Formatting Rules“ to easily rename subfolders. Or the „Crash Report“ function to easily restore the most recent backup in case of a system crash. Version History 2013.05.09 Added new backup files support for the Android 5.0 Lollipop update Added backup projects for Chromebooks Added new filter function for the exclude files and folders Added new compressed file compression function Added new folder compression function Added more sorting options Added new optimization function for the backup lists Added new folder sorting function Added new subfolder sorting function Added more filtering options
