NOTE: This game is restricted to PlayStation®4 and is available only in Japan. *Dreaming of a new fantasy world is ok, but for people who have actually studied fantasy, "an epic drama" is more like it. *A young man, who has lived in the northern lands, receives a letter from a friend who is living in the southern lands. This means an adventure awaits. The character cannot speak and is equipped with only one weapon, and yet he must find his way through the vast lands and record the voices he encounters along the way. *A story of ever-changing legends? What is an Elden Lord? *The gameplay of Tarnished is quite different. You equip weapon/armor and create your own way of fighting, so you can freely choose your play style. *Elder brother to Guardians of the Wasteland and Guardians of Rebirth. While both titles focus on drawing together people who like to kill monsters, Tarnished is a fantasy RPG that allows everyone to enjoy what they like. *Tarnished will be compatible with both PlayStation®4 and PlayStation®4 Pro. Discover a new world of fantasy, friends, and adventure as you journey between the Lands Between. (C) 2018 Hatsoft Co., Ltd. All rights reserved. ©2018 HATO. The present invention relates to improved polymeric materials useful in medical applications in general, and in particular, to copolymers which are useful for occluding or sealing natural or artificial body orifices or tissues in which a compromise between flow properties and biocompatibility are desired. Polymeric materials, including those composed of polyvinyl chloride, have been proposed as occluding agents for naturally occurring orifices such as nasal septums and colostomy channels. The need for occluding agents, such as nasal plugs and nasal prostheses, arose when there was extensive migration of the bony partition of the nose with advancing age. One example of this is the migration of the posterior margin of the maxillary sinus through an ostial defect in the maxillary sinus. There are also a variety of other conditions such as sinusitis, polyps, cysts, tumors, congenital deformities and traumatic lesions which can require a rhinoplasty. The resulting communication between the anterior and posterior cavities is a natural response which occurs with the loss of bone tissue and resorption of the vomer and palatine bones. Plastic materials, such as polyurethane and silicone, are generally preferred for these devices over polyvinyl chloride because of the potential to impart better healing properties to the medical device. However, such materials typically have problems which affect their physical properties and/or biocompatibility. These problems include a tendency to form voids during molding, creasing, excessive wicking and bleeding through the plastic into tissue, poor adhesion to the medical device to which it is to be applied, and tearing of the body tissue that is contacted by the material. Polymeric materials which are useful in a variety of medical applications such as those discussed above include copolymers of vinyl acetate and ethylene. Such copolymers are disclosed in U.S. Pat. Nos. 4,017,617 and 4,208,
