Hotwell Studios is a new company founded by Mario Fusi, who for the past fifteen years has been working as a game designer and VFX supervisor in the industry. Hotwell will be initially focusing on two very different projects, both intended for mobile devices and VR: First up is The Path, a new Point & Click adventure game set in an alternative version of the The Secret of Monkey Island universe. Lie Like a Vampire: All vampires lie. They can't sleep in daylight or be exposed to blood for anything but medical or culinary purposes. Vampires make their home in crypts, sepulchres, cemeteries, and even huge crypts beneath the earth. Different types of vampires inhabit different sorts of places. Haunted houses and castles are common. The vampire homes of the mansion vampire are often impregnated with a unique scent for identifying them. The smell of rotting flesh is a vampire's favorite. They smell all the blood in the air, anywhere there might be human blood. Sci Fi Fan Interest: Vampires come in many shapes and forms. In mythology and fantasy, vampires of the classic mold were once very common. However, more modern vampires tend to be zombies. Today, the classic vampire is an English historical figure, Vlad Dracula. Thankfully, that style is less and less common. Young Blood: Baby vampires feel all the human emotions and like younger versions of the adults that raised them. Children of the Night: Baby vampires lack all sense of true evil, greed, or hate. Highly reproducible assessment of proliferation of cervicovaginal lavage cells of women using all-oral contraceptive pills. Research has shown that the proliferative activity of various cell types in the human cervix and lower genital tract is altered by hormonal

interventions, and that this may be a potential mechanism underlying the increased rate of precancerous lesions that are seen in women with a longer duration of oral contraceptive (OC) use. The proliferation assay, which relies on the ability of cells to incorporate exogenous 5-[bromo-2'-deoxyuridine] (BrdU), has been applied to lavage cells obtained from the cervix and endocervix of women on continuous OC use. Intralaboratory and interlaboratory reproducibility of the BrdU labeling assay was assessed for a range of OC formulations and for varying culturing media. Excellent intra- and interlaboratory reproducibility was obtained for as little as 1.0×10^5 cells after 24 hours of culture. This
