The Elden Ring is a fantasy action RPG set in the Lands Between, a country which stretches between the lands of the living and the dead. The center of this world lies in an ancient realm known as the Darklands, a fantastic and enormous place. In the Darklands, new worlds and creatures are born from the souls of their deceased inhabitants. These worlds are called Planes, and each Plane has a terrifying power which can be harnessed for the great glory of Tarnation. In the game, the player takes on the role of a person known as a "Tarnation", a being who will take on these Planes to achieve the impossible. The player's task is to establish a mighty alliance with these Planes and become an Elden Lord, the ruler of the Darklands. A Tarnation's journey begins in the Lands Between, a beautiful and varied land. The Tarnation is given a magic sword and equipped with an impressive set of equipment, allowing the player to progress smoothly from Dungeons to Dungeons filled with ferocious monsters and in the end, reaching the Darklands. In the Darklands, an Elden Lord has the power to bring these Planes under his authority, but each Plane has a fearsome enemy to challenge his might. How will you go about this task? "I am an anonymous adventurer; playing games and living life." I'm looking forward to hearing about your adventures in the Lands Between! For any inquiries, Thank you for your support of Elden Ring. -- N. Aima, the producer of Elden Ring

Amazon and other cloud providers could face penalties under a new European Union requirement for companies to have effective mechanisms to prevent hackers from accessing customers' data, according to a draft proposal published Wednesday, Sept. 18, 2013. (AP Photo/Amazon.com) BRUSSELS—Europe is mulling new rules for data stored in the cloud, drawing on recommendations from a prestigious international security panel that cloud services should be considered high-risk and require more security than traditional internet service providers like Google and Microsoft. Such a move could lead to new payments for such services and even higher costs for companies that are currently shifting data off site to avoid security risks. The proposal has been approved by the European Commission, but some details remain to be sorted out, leaving the rules in flux. After considering the E-Lert, an independent panel established by the European Parliament in 2010 to advise the commission on data security, the 28-member European Union wants cloud vendors like Amazon and Microsoft to make security improvements on their own. "Cloud providers must continually invest in security or face potential infringement," the commission said Wednesday in a statement. "This new norm provides a strong legal instrument with which to do so," said Gunnar Gardahl, the commission's director general for information society and media. "Our action sends a clear signal to cloud providers that they are required to take reasonable security measures, and that all the existing rules
