As he neared the oval table, he placed down a finely crafted piece of wood for a prop. Once he reached the table, he turned to his left and placed his hand over a large book, the edges of the binding made from a black and silver material. The edges and central cover were engraved and etched in patterns that bordered on the impossible to perceive, and coming into contact with the book sent a thrill down the spine of the user. Epic Fantasy Online : >Q: mongodb do i have to run my java code in mongo aggregate? Hi guys I am newbie in mongo database so far :) Can I run my query in java code without running it from mongo shell using mongo aggregate if I'm not wrong any native mongo collections is automatically loaded or? A: MongoDB server and driver are not the same thing. There is no Java library that can "run" the MongoDB server. MongoDB shell "automatically loads" the native collections when you connect to it. All the available shell commands run against the server. The Java Mongo driver is the library that you need to run the code against a MongoDB server, it will not do anything else.
