When you shoot in RAW format, you can manipulate images in Photoshop to achieve effects that were not possible in the original RAW file. (_See_ the next section for an in-depth discussion on working with RAW files.) Here are a few of Photoshop's biggest features: * **Graphics:** This feature enables you to create your own graphics and vector objects. While you may already have many of these objects created, you can add extra ones. * **Layers:** This feature enables you to create multiple layers within the image. You can hide the layers, cut and paste them, and also apply effects to individual layers. You can create multiple copies of each layer. Each layer retains its own selection and blend modes. * **Blend modes:** You can blend layers together with the blending modes (see the upcoming section "Blending, Masks, and Gradients"). You can also blend colors, lighten or darken images, and more. * **Panoramic:** You can stitch or rotate an image and create a new one. The results can be impressive, enabling you to create an image that is much bigger than the size of the camera that captured the image. * **Paths:** This feature helps you to create shapes for designing a graphic that can then be filled in a variety of ways. You can create a complex graphic in a matter of minutes. * **Text:** You can create text with overlapping fonts and apply fonts and effects to a variety of text formats. You can add a basic text box to a graphic, adjust the box's size, and apply more than one font to a specific area. * **Brushes:** Using this feature, you can create your own brushes — the kind of brushes you use in the _Chapters_ in this book. You can save, load, and name your brush, and share them with others. * **Effects:** This feature enables you to add distortion, drop shadows, and other effects. * **Guides:** The Image Guidance tool enables you to position objects in an image. You can place guides between or within individual objects. * **Animations:** This feature enables you to create a number of animations. * **Filters:** This feature enables you to add your own filters to an image. This makes the process of creating new filters easier. * **Smart Objects:**

The United States will be the only party to the United Nations Security Council that voted on Friday to impose strict sanctions on North Korea over its latest nuclear test. The U.N. sanctions, which prohibit shipments of oil to the regime of Kim Jong Un, are among the most sweeping to date, but America is still the only nation to directly condemn its latest underground nuclear test, which occurred on Feb. 12. The U.N. resolution passed unanimously with the United States abstaining. China also abstained, as did Japan and South Korea. At the United Nations, Secretary of State Rex Tillerson will now brief the Security Council on the response to the nuclear test. There, the world body has the authority to impose additional sanctions. The sanctions could reach North Korea's military and civil sectors, and could also include further restrictions on exports of minerals and textiles. But, North Korea has responded with threats that the country is prepared for war. "We will have to take care of the case and situation of the DPRK as the United States first by using an all-out tactical military means and the pre-empt
