Pre-order FIFA 22 today FIFA 20 introduced a brand-new ball physics technology that brought ball control and ball intelligence to FIFA games like never before. However, the last few years have seen new advances in tackling models from EA Sports, which has led to some exciting changes in terms of what we now know about ball control in FIFA. "Based on advanced physics simulations, we've made tackling difficult for players - even the best," said Craig Ewins, Creative Director, FIFA. "But we've also focused on improving what matters to fans: the decisions that decide a match and the tackling mechanics that make them feel so realistic. FIFA 22 introduces "HyperMotion Technology," which uses motion capture data collected from a complete, high-intensity football match in motion capture suits. The data collected from player movements, tackles, aerial duels and on-ball actions is used to power FIFA 22 gameplay. This all combined results in enhanced player performance and more controlled, realistic gameplay, ultimately providing players with a higher challenge. What would FIFA without the ball? In FIFA 21, the ball was a huge focus in our game design, and we continued this trend in FIFA 22. We know, from players and fans alike, that the more time players can spend with the ball, the better they can perform. You might
