The role of the mental health team in the management of clinical depression. Depression is currently recognized as the leading cause of disability in the United States. The signs, symptoms, and consequences of depression may be misinterpreted or ignored, resulting in delays in diagnosis, which significantly increases costs for both the individual and society. Although the majority of patients with depression receive some treatment, only a few experience a major clinical response to treatment. The present report summarizes the results of a survey of the professional staff members of the General Internal Medicine Division at the University of Maryland-Baltimore (UMB) Medical Center and of the UMB psychiatric outpatient service to determine the education, training, and experience of those staff members in the diagnosis and management of depression. We then compare the results to an educational intervention conducted specifically for the mental health staff of the UMB Medical Center. Fifty-nine percent of the psychiatrists

accuracy? Say I have different tests with different sample sizes in them. Say test A is very accurate and test B is less accurate. Are there good charts to compare test A with test B? For example if you look at a plot, test A might show lower p-values even though they are inaccurate. A: For hypothesis testing the p value is equivalent to the probability of getting a result as large or larger than the observed difference in samples if the null hypothesis is true. In the context of hypothesis testing, a large p value corresponds to a small probability of observing a difference as large or larger than the observed difference in samples if the null hypothesis is true. The p value is the probability of seeing a result as large as or larger than the one observed if the null hypothesis is true. A large p value is evidence against the null hypothesis. When testing for correlations, the p value is the probability of getting a correlation coefficient as large or larger than the observed correlation coefficient if the null hypothesis is true. 6d1f23a050
