.Q: How to get data from files in Flask? I have the file: 1 1.2 0.2 2 0.4 2 And the class: class Data: def __init__(self, pairs): self.elements = pairs # self.info = False # self.desc = [] # self.description = [] def __str__(self): return self.elements How to get the file data from the file, and pass them to the class

Data? What I have tried: `def generate_data(): with open('data.txt', "r") as f: new_data = f.read() return new_data def render(): new_data = generate_data() new_class = ClassData(new_data) return new_class` When I try to get the values to the class, it looks like that: `new_class = ClassData(new_data)` `AttributeError: 'list' object has no attribute '__str__'` A: The error you are getting is because you are returning a list from the `__str__` method. A list can not be converted to a string, it should be a string in this case, so just use `new_data`. Additionally, your `new_data` variable is a string, which means it will have as a newline character. You should use `new_data.replace(' ', '')` instead

of new_data in your example to get rid of this. It is not often that I get to see a boss battle live. Usually, I need to wait for the videos or pictures, or play the game multiple times until I get the best seat in the house for it, but recent weeks have been filled with some amazing boss battles, 6d1f23a050
