Find out more.Q: Python multiple if statements I am trying to search an NSString and for each instance of the name of an individual student I want to write it to an existing file. The problem I am having is that the second name is not being written into the file. Here is my code:

```
def do_a(self): self.engine_list = [] self.nameList = [] student_name_array = [_txt stringByTrimmingCharactersInSet(NSCharacterSet.whitespaceAndNewlineCharacterSet()) for _txt in self.allEngineNames.allKeys] for name in student_name_array: if name == "Name: " + self.name: self.engine_list.append(name) f = open("EngineData.csv", "a") f.write("%s " % name) f.close() nameList.append(self.engine_list) nameList.append(name) elif name == "NewName: " + self.name: self.name = "NewName: " + self.name f = open("EngineData.csv", "a") f.write("%s " % name) f.close() nameList.append(self.name) c6a93da74d
```
